

Requirements

- Please automate a booking up to a declined payment on
 - <https://www.ryanair.com/ie/en/>
 - Use any card number and verify the error message.
- Languages, use any one of the following methods:
 - Java (maven, junit), Javascript (protractor), Ruby or Python
- Use Page Object Pattern
- Give some documentation on why you chose what you did
 - ...and **documentation on how to run these tests**.
- Show reporting for your results

Nice to haves:

- Git - Use a Github account if you have one, to provide the source code
- We are fans of BDD and Cucumber in Ryanair, use these if you can
- The test itself is quite simple, though you should use all your skills to prove your knowledge & ability.

Return Delivery Format

Please use Github if possible, otherwise provide a link to a dropbox account or as a last resort email .zip format of source code (standard zip compression only)

Tests will be reviewed on mac OSX

Contact

connollys@ryanair.com for any questions or clarifications about the test.

Example Test Input

Given I make a booking from "DUB" to "SXF" on 11/03/2016 for 2 adults and 1 child
When I pay for booking with card details "5555 5555 5555 5557", "10/18" and "265"
Then I should get payment declined message
